

1000W Solar Awning

What is a solar awning?

There are two different definitions of solar awnings. One is an awning that runs with its solar panel. The awnings extend and retract automatically using solar power. The second is awnings lined with solar panels that provide shade and generate power. However, they don't generate that much electricity, so the technology isn't quite there yet.

Where can I pre-order a rv1000w solar awning?

The official website of Eco-dynamic Tech., has been launched, offering interested individuals the opportunity to pre-order the Artpiece RV1000W solar awning at a 25% early-bird discount. Source: Golden Solar New Energy Technology Holdings Limited.

Which solar panel should I use for my RV awning?

Australian RV recommends the Victron Energy SmartSolar MPPT 150/85 regulator (sold separately). Heterojunction Back Contact (HBC) solar cells are used for the awning, a type of solar technology that offers improved efficiency over traditional solar technology, while energy loss caused by heat is minimal.

How much does a solar awning weigh?

The 12ft awning weighs 63kg, while the 16ft unit weighs 77kg. That sounds like a lot, but as Australian RV's Rod Francis said, for anyone intending to use the Solar Awning as a replacement for roof-mounted panels, you may be able to achieve a net weight gain of just 10kg, noting as well the weight saved by not fitting a conventional awning.

How much power does a 12ft solar awning put out?

The 12ft Flexible Solar Awning puts out a maximum of 850W, with a peak of 70A at 12V, while the 16ft awning puts out 1050W, with a peak of 88A at 12V. It is fully electric, too, with a brushless motor actuating gas struts that open the awning, providing 2.3m of coverage out from the van.

What is a flexible solar awning?

The Flexible Solar Awning will take your caravan's 12V system to the next level. Distributed by Australian RV, the Solar Awning comes in two sizes and output capacities. Find out more!
