My idea is to use a 12Ah LiFePO4 battery to power a gate opener. The seller states the opener's power to be 1/4 hp, which I believe is about 185W. The opener will be running for only about 10 seconds each time the gate is in motion, so I guess the current drawn from the battery won't be astronomical for its small size.

The runtime of a 12V battery with an inverter depends on various factors, including battery capacity, power load, inverter efficiency, and battery type. A 100Ah lead-acid battery running a 300W load typically lasts 1.8 hours, while a lithium battery of the same capacity can last 3.6 hours due to its deeper discharge capability.
