

20ah battery retrofit inverter

What is a retrofit inverter in a photovoltaic system?

The retrofit inverters only manage the storage systems and are mainly used in existing photovoltaic systems to keep the system configuration unchanged. In this case, the retrofit inverter of the storage system and the photovoltaic inverter are two distinct machines where the power of the storage is added to the power of the photovoltaic.

What is a GoodWe SBP battery storage retrofit?

The GoodWe SBP series is the world's first AC-coupled battery storage retrofit solution with UPS function for single-phase and three-phase systems. It can effectively upgrade any existing string inverter system by adding a backup battery.

What is a GoodWe BT series inverter?

The GoodWe BT series is an AC-coupled retrofit inverter, which is able to upgrade existing three-phase on-grid PV systems to storage systems. The AC-coupled solution can transform any three-phase on-grid PV system into an energy storage system with batteries, enhancing grid independence and self-consumption.

What is BH series inverter?

The elegant and compact design is perfect for indoor installation. As a single-phase, AC-coupled retrofit HV inverter, BH Series can upgrade existing on-grid PV systems to storage systems. With a wide battery voltage range of 85-460V, the inverter fits users' needs flexibly and makes the energy system construction much more effortless.

What is a GoodWe BH series inverter?

The GoodWe BH Series inverter is a single-phase, AC-coupled retrofit inverter compatible with a wide range of high voltage batteries from 85V to 460V. It is designed to maximize self-consumption with a UPS-level switching backup function.

What is a photovoltaic inverter?

In this case, the retrofit inverter of the storage system and the photovoltaic inverter are two distinct machines where the power of the storage is added to the power of the photovoltaic. Download the Storage Map to find out about all the possible configurations between inverters and batteries.

A lithium battery grid tie inverter converts DC power from lithium batteries into AC power, synchronizing it with the utility grid. This allows excess solar energy to be stored and fed back into the grid, optimizing energy use and reducing electricity bills. It supports efficient energy management, grid stability, and maximizes renewable energy utilization. Global Batteries

Lithium batteries can last for thousands of cycles. But as batteries are used and charged more, they hold less charge capacity. After about 500 cycles, a lead-acid battery will lose about 20% of its capacity, while a lithium battery will 20% of its capacity after about 2000 cycles. Check your battery's data sheet for more accurate numbers.
