What is the maximum input voltage for a 40kW inverter?

The inverter has a maximum input current, such as 40A for 40kW. Only when the input voltage exceeds 550V, the output is likely to reach 40kW. When the input voltage exceeds 800V, the heat generated by the loss increases sharply, causing the inverter to derate the output.

What can a 400 watt power inverter run?

There's quite a lot that your power inverter can run. Here is a list of other products that can be powered by a 400 watts inverter: Digital cameras. Some Gaming consoles. MP3 Players. Portable Stereos. Some portable coffee makers (these use 150 - 300 watts on average). Small fridges (100-400 watts based on size). Selected power tools.
