Make sure your charge controller's maximum PV voltage is higher than the maximum open circuit voltage of your solar array. For example, let's say you calculate your max solar array voltage to be 105V. Then a charge controller with a max PV voltage of 100V is too low. You'll need to instead get one with a max PV voltage of, say, 150V.

How to Calculate Solar Panel Wattage. This wattage refers to the overall power output that a PV panel can provide in a specific amount of time. It is determined by factors such as voltage, amperage, and number of cells. Typically, lower-wattage panels are more compact and portable, whereas the higher-wattage ones are often larger and less common.

660W solar panels are packaged with MBB M12/G12/210mm PERC solar cells, which have high power and high efficiency, and provide the most economical and effective solution for reducing the LCOE of any size PV system. ?Key ...
