

Boston s new outdoor power supply

How much power will New England have this winter?

ISO-NE expects that demand among the 14 million electric customers in New England will peak this winter at 19,710 megawatts under average winter weather conditions of 10 degrees and as high as 20,349 MW if average temperatures drop below 5 degrees.

Does Massachusetts have a natural gas power plant?

Natural gas-fueled electricity production has increased significantly in Massachusetts due to the decline of coal, oil, and nuclear power. The last coal-fired power plant in Massachusetts closed in 2017, and the state's only nuclear power plant shut down in 2019.

Does Massachusetts have an electric grid?

When we talk about the Massachusetts electric grid, we often think about it as being exclusive to our state. But that isn't the case. Massachusetts is a member of Independent System Operator (ISO) New England, which covers six states, including Maine, Connecticut, New Hampshire, Vermont, and Rhode Island, as well as Massachusetts.

How does the New England energy system work?

It transports energy to millions of homes and buildings using more than 8,000 miles of transmission lines. The ISO's master control center, located in Holyoke, Massachusetts, and six additional local control centers, are responsible for monitoring, dispatching, and controlling the flow of electricity across the New England grid.

How does Massachusetts meet its energy needs?

To meet demand, additional electricity is brought in from out-of-state sources. So, while a significant amount of the electricity produced in Massachusetts comes from renewable sources, the state still relies on many nonrenewable sources to meet its energy needs.

Will electric grid operators be able to keep lights on in New England?

Electric grid operators expect to be able to keep the lights on in New England this winter.
