

Can the French outdoor power supply be charged at home

Do you need electricity if you buy a house in France?

When you buy a home in France - it's likely to have an electricity supply already. Of course it might not, there are plenty of ancient properties that expats love to do up and they might need a supply laid on. And new builds will also need a new supply. But, let's just assume, you've bought a house and it's got electricity.

Who provides electricity in France?

The vast majority of electricity in France is supplied by the state-owned EDF (Electricit  de France), although there are now also several other electricity providers, and it is worth shopping around for the best deal (more about that in a moment). First, let's get into the basics of setting up and connecting electricity at your French home.

How does electricity work in France?

The electricity supply in France is delivered to homes at 380/440 volts through three separate phases (not one as in some countries), which is then shared across the three phases at 220/240 volts with a frequency of 50 Hertz (cycles). Some appliances, such as large immersion heaters and cookers, draw power from all three phases.

Is French power safe?

Instead, the earth prong is actually built into the wall socket. In addition, sockets in France do not have an on/off switch like their British counterparts. Whilst this is not inherently less safe than in the UK, it can be a little disconcerting the first time you use French power.
