

What is the solar energy capacity of Croatia in 2021?

As of 2021, the projected solar energy capacity in Croatia is at 6.8 GW. Of this capacity, 5.3 GW is attributed to utility-scale PV plants and the rest (1.5 GW) is attributed to rooftop solar systems.

What are the different types of solar inverters?

There are mainly three types of solar inverters -- string inverters, micro-inverters, and power optimizers. All these inverters have a different system. However, they have the same function, which is collecting DC power from batteries and convert into AC, though with different levels of efficiency.

What is a string inverter?

String inverters are standard centralized inverters. Usually, a majority of small solar systems use string inverters or "centralized" inverters. In a solar PV system that comes with a string inverter, all the solar panels are connected together into "strings."
