

How has Cuba regained electricity?

In the last 24 hours, Cuba has made significant strides in restoring electricity: 7:54 a.m.: Felton 1, part of the Lidio Ramón Pérez thermal power plant in Holguín province, was synchronized with the national grid, marking an important step toward stabilizing power after the total system disconnection on October 18.

Why is Cuba's power system deteriorating?

As POWER has reported, Cuba's power system has faced increasing strain since 2021, with blackouts becoming more frequent due to accidents at key generation units and aging thermal power plants. Thermal plants are outdated, with most surpassing their 30-year lifespan.

Is the MINEM restoring power in Cuba?

On Friday, Oct. 18, Lázaro Guerra, director of Electricity of the MINEM, said on Cuban television that the restoration process was ongoing. "At this moment, we have microsystems in all provinces except Artemisa, where limited power is reaching nearby consumers," he said.

How does Cuba get its power?

Cuba gets its power from large thermoelectric plants like Antonio Guiteras and some smaller ones, which run on crude oil. While the island produces about half of its own crude oil, it must import the remainder, which can be difficult -- and costly -- due to U.S. sanctions.

Why is there a power outage in Cuba?

Cuba's power grid has been plagued by frequent outages in recent months, with more than half of the country experiencing power cuts during peak hours. The outages are primarily caused by fuel shortages and aging infrastructure. In many parts of the island, electricity is crucial for cooking and water pumping.

Why does Cuba have a blackout?

In many parts of the island, electricity is crucial for cooking and water pumping. The blackouts -- caused in part by failures in old thermoelectric plants -- are devastating, impacting families, schools and businesses. Cuba gets its power from large thermoelectric plants like Antonio Guiteras and some smaller ones, which run on crude oil.
