An electrical double layer capacitor/Supercapacitor is nothing but a high-capacity capacitor with capacitance values much higher than normal capacitors but lower voltage limits. Supercapacitors store charge electrostatically (non-Faradaic) by reversible adsorption of the electrolyte onto electrochemically stable high surface area carbon electrodes.

This super capacitor uses advanced electrolytes and can be used to configure various-sized cells into modules to meet the power, energy, and voltage requirements for a wide range of applications.
