

# Does Tonga repair home solar lights

How to clean solar lights after installation?

After installing solar lights, you need to ensure the panels are always clean as they tend to get dirty with time. Dust or any debris on the panels reduces the lighting time and the charging process, and that's why it's a great idea to clean them now and then. You can use a hose and soapy water, which is the most effective way.

How to make solar lights last longer?

In case there is an overgrowth of grass or bush surrounding the solar lamp, you can go with the option of trimming it short. Ensure that there is no shading on the solar panels. By doing this, the solar lights will get enough sun for the batteries to remain fully recharged.

Are solar lights reliable?

Solar lights are known to be resilient by design, providing reliable lighting in a variety of outdoor conditions. They are put outside under a sturdy element to withstand various weather conditions. As a result, today, they are fast becoming an alternative lighting mechanism in offices, homes, and even cars!

What if my solar light sensor is faulty?

If your solar light sensor is faulty, you can always replace it as long as the rest of the lamp is in good condition. The good thing is that some manufacturers offer replacements, so you can reach out to the manufacturer of your solar lights to repair the sensors.

How long do solar lights last?

Ensure that there is no shading on the solar panels. By doing this, the solar lights will get enough sun for the batteries to remain fully recharged. Batteries are essential components in solar lights, and you need to replace them after approximately three years.

Why are solar lights not working?

Unlike other fuel lamps, solar lights are quite beneficial. They are cost-friendly and don't pollute the environment. In short, they are an incredibly amazing source of energy. But what could be the cause of them not working? The following could be some of the reasons: 1. They are not receiving enough sunlight
