

Dublin's need for outdoor power

What's going on with EirGrid's 'powering up Dublin' project?

Several wooden coils with power cable laid in a trench. Photograph: iStock.com Electricity grid operator EirGrid has just begun a public consultation programme for the Powering Up Dublin project which will see 50km of underground cables installed across the city.

Will EirGrid install 50km of underground cables in Dublin?

EirGrid, the developer and operator of Ireland's electricity grid, has today launched a public consultation for a major programme to install over 50km of underground cables across Dublin city. Dublin's electricity infrastructure is ageing and reaching the end of its life, with some cables installed up to 50 years ago.

How will Dublin's electricity infrastructure impact traffic in the next 5 years?

Traffic in Dublin could be impacted for the next five years by works to upgrade the capital's electricity infrastructure. EirGrid - the power grid operator - says it needs to replace 50km of cables, some of which are up to 50 years old, to ensure the consistent and reliable supply of power in the future.

What is 'powering up Dublin'?

Commenting on the consultation launch, Sinéad Dooley, Head of Public Engagement with EirGrid said: "The Powering Up Dublin programme will help deliver a consistent and reliable supply of electricity for Dublin. Work must be done now to ensure the city's electricity infrastructure is fit for purpose, resilient and will endure long into the future.

How does EirGrid work in Dublin?

Dublin's electricity network. Most of the cables operated by EirGrid in Dublin are underground. These cables connect the various electricity substations located around Dublin.

How does the electricity grid work in Dublin?

Because Dublin is a city, the electricity grid is mostly underground with cables linking substations in different parts of the city. These substations act as "nodes" where electricity voltage is stepped down from the high voltage levels used on the grid to lower voltage levels, so that it can be used by customers in their homes and businesses.

Dublin's electricity infrastructure is ageing and reaching its end of life. Work must be done now to transform and modernise the city's infrastructure so Dublin can continue to develop and thrive, while increasing the power from renewable sources. In this first phase, with our project partners, we are installing over 50km of cables across Dublin.

Dublin's need for outdoor power

With the Dublin Mountains just a stone's throw away that encompasses 43km of mountain trails, country paths and rural roads you'll find plenty to choose from.
