

What is ek220 gas meter?

The EK220 is a battery-operated volume converter. The device records the low frequency operating volume pulses of a gas meter, measures the operating pressure and temperature of the gas and calculates the compressibility K as well as the conversion factor C.

What can I do with the ek220 volume conversion device?

Once signed in, you may be able to access additional documents for your account. In addition to volume conversion and data logging, the EK220 volume conversion device may be used for the flexible data recording of different measurement values and, in conjunction with either a modem or RTU, for station monitoring.

What is ek220 used for?

The EK220 can be used in many applications in the field of natural gas measurement and station monitoring thanks to four digital outputs, a flexible data logging function in conjunction with a freely configurable serial interface and different communication protocols.

How do I mount the ek220?

For wall mounting, the housing of the EK220 is equipped with boreholes. It can also be fitted directly to the meter or gas pipe using an attachment bracket.

Can ek220 be used in hazardous areas?

In RS485 mode, bus operation is also possible, in order to read out two volume converters via a communication module (modem, RTU). In compliance with the specifications laid out in the ATEX approval, the interface may also be used in hazardous areas in any configuration. The EK220 supports various communication protocols.

What communication protocols does the ek220 support?

The EK220 supports various communication protocols. Invoice-relevant data or process and operating data for network management can therefore be used simultaneously in many established central call-up systems and EDM systems.
