How does a solar inverter work?

DC power generated by solar panels is stored in the battery through the inverter. When electricity is needed, it is first supplied by solar panels. If the light intensity cannot support the operation of solar panels, the inverter will convert the DC power of the battery into a single-phase/three-phase power for home load.

What is a hybrid inverter?

Hybrid inverters are designed to optimize self-consumption of solar energy. They prioritize using solar power generated on-site before drawing electricity from the grid, which can lead to significant energy cost savings. Many regions have time-of-use (TOU) electricity pricing, where electricity costs more during peak hours.
