What's new with Huawei inverter?

Updated December 2020 Huawei have updated their inverter so integrate what was previously called their "safety box". The most important feature of the new integration means is optimiser monitoring. This is mostly important so you can easily identify if you have a failed optimiser. But it also allows you to see how each panel is performing.

What is the difference between Huawei inverter and optimiser?

This results in the lower performing panel actually dragging down the other panels in that string. The Huawei inverter, by contrast, has a variable input voltage and can work as low as 90 volts. The optimisers only work if there is shade or if panels are installed in multiple orientations.

Are Huawei inverters the new kid on the solar block?

Huawei inverters are the new kid on the solar block. I first published this Huawei inverter review in May 2018. It gained a bit of attention and some online criticism saying it was not accurate.

What is the difference between a Huawei inverter and a SolarEdge optimiser?

The Huawei inverter, by contrast, has a variable input voltage and can work as low as 90 volts. The optimisers only work if there is shade or if panels are installed in multiple orientations. This, in theory, will result in better reliability, and we will avoid the losses that can happen with SolarEdge blocking.

Can a Huawei inverter parallel a roofline?

The Huawei inverter has a tiny 11 amp input current. That's fine if you have a spacious roofline and can put panels wherever you like. But if your roofline is a little more complicated, you won't be able to parallel strings with standard panels because the current will be over the 11 amp input limit.

What do you like most about the Huawei solar optimiser solution?

There are three things I like about the Huawei Solar optimiser solution. Its electrical simplicity, its selective deployment and its flexible string voltage. The job of an optimiser is to adjust the panel voltage depending on the sunshine and shading so that the current in each panel is equal.

The Huawei software for PV inverters KTL is a free, flexible and user-friendly online configuration tool that supports you to comprehensively plan and design PV systems when consulting and providing solutions for your customers.
