From a small 300va to a 800Kva UPS running in parallel we have the expertise to provide the solution you require. The design, supply, installation and maintenance of your UPS system is our speciality.

What is an online UPS (uninterruptible power supply)?

Protection from power loss- An Online UPS (uninterruptible power supply) is connected in-line with your server and protects your IT equipment and systems when power is lost. In the unfortunately event of mains failure, the UPS will automatically transfer your equipment onto its internal or external batteries until power is restored.

How do uninterruptible power supplies work?

Uninterruptible power supplies are essentially a battery backup for your computers and critical services. They connect to your mains supply and have internal battery packs that provide storage during a power outage.

Why should you invest in an UPS system?

Invest in a UPS to protect your servers from power loss. We offer an extensive range of UPS (uninterruptible power supply) systems to serve our customers needs. Supplying various brands of UPS to suit your requirements and budgets.

Can an ups fully deplete a battery?

Yes, a UPS like any other equipment powered from a battery can fully deplete. This will all depend on how much back up time the UPS has and how long the power cut is. We stock a range of Uninterruptible Power Supplies (UPS), that are ready to be delivered, installed and maintained.

Should you install an uninterruptible power supply?

Installing an uninterruptible power supply is an excellent way to protect your mission critical systems. However, it is no guarantee of continual power as UPS components and UPS batteries can fail if they are not properly maintained to a high standard.

# London backup uninterruptible power supply sales

Online uninterruptible power supplies use a combination of rectifier and inverter to supply power to the AC load in normal operation. During a power failure, power is supplied with the support of an inverter. Conversely, an offline system supplies power from the AC mains to the load. An online system's output power supply stays on.
