the EU and many Member States have started operating price and margin monitoring systems in order to obtain a better insight into developments of prices, costs and profits along food supply chains. This study provides an inventory of the characteristics of food price and margin monitoring systems at EU and Member State level, in international

customers is through how they treat mark-ups.¹⁰ Mark-ups are added at every point in the value chain and until the final price that consumers pay. When input costs increase, firms throughout the value chain are likely to increase prices to maintain their mark-up percentages. This behaviour is not inherently problematic from a competition policy
