A dual-step supercapacitor-battery hybrid solar camp light was implemented and experimentally tested [136]. In the first step, the battery was charged using daytime solar energy. Then, the supercapacitor was self-charged using the camp light and transferred the energy to recharge the battery when there was no sustainable sunlight.

Electric double layer capacitors and supercapacitors are a class of electrolytic (polarized) capacitors that offer exceptionally high capacitance values in relation to their physical size and low voltage ratings; individual devices have ratings of a few volts at most, though products incorporating numerous series-connected devices to achieve higher voltage ratings are available.

A supercapacitor of a given weight cannot store nearly as much energy as a lithium-ion battery can. However, a supercapacitor can discharge far faster than a battery can. So while a supercapacitor (at present) cannot be
