Peak Shaving ESS can reduce consumers" overall electricity costs by storing energy during off-peak periods when electricity prices are low for later use when the electricity prices are high during the peak periods. ii. Emergency Power Supply

Building energy consumption occupies about 33 % of the total global energy consumption. The PV systems combined with buildings, not only can take advantage of PV power panels to replace part of the building materials, but also can use the PV system to achieve the purpose of producing electricity and decreasing energy consumption in buildings [4]. ...

It estimates the energy production and cost of energy of grid-connected PV energy systems for any address in the world. It allows homeowners, small building owners, installers, and manufacturers to easily develop estimates of the performance of potential PV installations, and can even compare solar"s cost to utility bills.
