Conventional vapour compression systems are widely used in hot-humid areas to satisfy people's daily lives by providing cooling and dehumidifying effects [6, 7]. Although this air conditioning method is feasible, it needs to cool the air to below the dew point temperature [8], which implies high energy consumption in the air conditioning process.. Additionally, traditional ...

Port Moresby, National Capital, Papua New Guinea is located in the tropics, which means it gets a lot of sunlight throughout the year. This makes it a pretty good place for generating solar energy all year round. The amount of ...

Port Moresby 100 square meters of solar air conditioning

When powered, the compressor increases the pressure and temperature of the working fluid which then cools as it passes through the condenser. Solar air conditioning uses solar power through hybrid systems that combine photovoltaics and batteries, or absorption chillers that cool air through evaporation and solar-powered fans.
