What is an ups & how does it work?

UPS units are emergency power supplies that ensure uninterrupted power delivery. In the event of a power surge or outage, the UPS takes over as the primary power source. This allows, for example, the saving of current projects and the safe closure of documents. A UPS protects hardware components from the negative effects of power surges.

Why am I unable to submit my ups to global power supply?

A few seconds delay in your submission is possible due to the volume we are experiencing. Global Power Supply is interested in your UPS! GPS purchases new, surplus and used large facility UPS systems, power distribution units, load banks, electrical switchgear, and others from: We also purchase generators, load banks, and ATS equipment.

What is the difference between online and offline uninterruptible power supply (UPS)?

Further, another major difference between online and offline uninterruptible power supply (UPS) is that an online uninterruptible power supply (UPS) uses a combination circuit of rectifier and inverter to offer power to a device, while an online uninterruptible power supply (UPS) supplies power directly to the load.
