Do smart devices need an uninterruptible power supply (UPS)?

Many smart devices have built-in battery packs, with modern laptops packing enough cells to last a whole day. However, typical desktop computers, routers, and similar devices still need to be plugged into a power source all the time to work. That's where an uninterruptible power supply (UPS) comes in.

What is a ups & how does it work?

A UPS's job is to provide power to the devices connected to it if a primary power source is cut off or the voltage reaches extremely low levels. Primarily designed for things like PCs and network systems, it's basically a huge battery that works as a middle ground between standard AC power and a generator.

Uninterruptible Power Supply (UPS) - A UPS is a battery backup system that can provide electricity for a short period, typically a few minutes to a few hours, depending on the battery size and usage. Battery Backup - A battery backup system is another backup electricity that can keep small appliances and tools running during an outage.
