The capacitance of a capacitor is how much electric charge it will store for each volt applied on its leads, given in a unit called farad (F). Capacitors used in consumer electronics products are ...

Supercapacitors, compared to capacitors, have a larger area for storing more charge, with capacitance into the farad (F) range, and they store more energy than electrolytic capacitors. They have a low leakage current and are suitable for many applications that can operate in the 1.8V - 2.5V range.

an accumulated capacitance of 20 to 40 mF/cm² per unit area is obtained. Suppose the activated carbon electrode shows the same action as that of mercury, then activated carbon with a surface area of 1000 m²/g will produce a capacitance of 200 to 400 F/g. However, such a high capacitance is not actually obtained.
