

Super Farad capacitors are all brand new

How many farads does a supercapacitor have?

It has a capacitance of 500 farads, a diameter of 35 millimeters, and a height of 68 millimeters. The manufacturer gives all buyers a 200-day warranty on the supercapacitor. That means if the supercapacitor does not work or malfunctions within the first 200 days after you purchase it, you will receive a replacement for free.

What is a supercapacitor?

A supercapacitor is a specially designed capacitor which has a very large capacitance. Supercapacitors combine the properties of capacitors and batteries into one device. Supercapacitors have charge and discharge times comparable to those of ordinary capacitors.

What makes supercapacitors different from other capacitors?

Available in a wide range of sizes, capacitance and modular configurations, supercapacitors can cost-effectively supplement and extend battery life, or in some cases, replace batteries altogether. What makes supercapacitors different from other capacitor types are the electrodes used in these capacitors.

What are supercapacitors & EDLC?

Supercapacitors, also known as ultracapacitors and electric double layer capacitors (EDLC), are capacitors with capacitance values greater than any other capacitor type available today. Supercapacitors are breakthrough energy storage and delivery devices that offer millions of times more capacitance than traditional capacitors.

How long does a super capacitor last?

The life of supercapacitors will double for every 10°C decrease in temperature or voltage by 0.1V. Supercapacitors operated at room temperature can have life expectancies of several years compared to operating the capacitors at their maximum rated temperature. L1= Load life rating of the super capacitor (typically 1000 hours at rated temperature).

What is the maximum charge voltage of a supercapacitor?

While an ordinary electrostatic capacitor may have a high maximum operating voltage, the typical maximum charge voltage of a supercapacitor lies between 2.5 and 2.7 volts. Supercapacitors are polar devices, meaning they have to be connected to the circuit the right way, just like electrolyte capacitors.

Specification: Brand new Dielectric material: Super farad Shape: Cylindrical Color: black Diameter: approx. 10mm Length: approx. 26mm Capacitance: 10 Farad Max. voltage: 2.7V ESR: 60mΩ permissible voltage: 2.5V Lead wire type: Same direction Allowable deviation: -20~40% Frequency: low frequency Application scope: low voltage Feature: The volume is ...
