How to choose a power inverter?

If you need the inverter to run the resistive load (like laptop, TV, electric cooker, LED light), please choose the inverter with continuous power higher than the appliance's rated power. For example, for the power inverter with continuous power 2500W, it is suggested to run the appliance with rated power less than 2500W.

How much power should an inverter use?

It is best to use 80% of the rated power. If you need the inverter to run the inductive load (for appliance such as compressor, motor, water pump), please calculate the power of inverter 3 to 7 times higher than the rated power of your appliance. Product Certification:
