

What is an explosion-proof uninterruptible power supply system (UPS)?

Orga helps make daily operations easier, with Orga's Explosion-proof (EX) Uninterruptible Power Supply system (UPS). What does an Explosion-proof Uninterruptible Power Supply system do? The batteries of our EX-certified UPS (Uninterruptible Power Supply) continue to supply power when the normal power supply is cut off.

What is an uninterruptible power supply?

An uninterruptible power supply, commonly known as "UPS Power Supply" is a device that is designed to supply power to your computers, servers and data centres in case of main power failure, electrical surge or unexpected power cut off.

Why do I need an ex-certified UPS (uninterruptible power supply)?

The batteries of our EX-certified UPS (Uninterruptible Power Supply) continue to supply power when the normal power supply is cut off. This ensures that critical systems keep running in order to keep the asset safe and compliant with relevant regulations in every situation, even in hazardous areas.

How is the ex Ups built?

The EX UPS is built in accordance with the system sizing calculation and based on client requirements. Each system is built up in 1 x 100%, 2 x 100%, 2 x 50% or N+1 configuration and customised to the client's preferred setup. Each system is built up from one or more EX battery boxes and one or more EX battery chargers for even more reliability.

How many kVA does an ex Ups supply?

Over 1,225 kVA in EX UPS's supplied to offshore assets, represented by 350 charger modules in the last 10 years. This system is designed to meet both your specific requirements and is zone 1 certified for the use in a gas hazardous area. This robust system has a long life span and requires minimal maintenance.

Home » Uninterruptible Power Supply - UPS Systems » Single Phase UPS Systems Here at Critical Power Supplies, we have an exceptional range of single phase UPS systems available to purchase online. The technology used to generate and distribute electricity in many countries around the world produces either a three-phase or single-phase supply.

Online uninterruptible power supplies use a combination of rectifier and inverter to supply power to the AC load in normal operation. During a power failure, power is supplied with the support of an inverter. Conversely, an offline system supplies power from the AC mains to the load. An online system's output power supply stays on.
