

# Uninterruptible Power Supply for Polish Telecom

What is a DC uninterruptible power supply (UPS) with a battery?

A reliable DC uninterruptible power supply (UPS) with a battery is essential for the telecom industry, keeping communication networks connected and businesses online during power interruptions. Rectifier Technologies offers a range of power supply solutions that keep your network up and running.

Why is a DC uninterruptible power supply important?

Telecom operators and businesses can suffer considerable losses due to abrupt power outages, resulting in downtime and loss of revenue. A reliable DC uninterruptible power supply (UPS) with a battery is essential for the telecom industry, keeping communication networks connected and businesses online during power interruptions.

What is uninterruptible power supply system?

Uninterruptible power supply system is provided for consumers supply with uninterruptible DC and AC. Uninterruptible power supply system consists of: matching transformers. Uninterruptible power supply system generates input and output three-phase line voltages 220,380 V AC to power range from 15 up to 60 kVA according to Customer's request.

Why should you choose an IFP series ups?

It is ideal for PC users or small business companies, as well as for small telecom applications. The iFP series is equipped with AVR to reduce the impact of unstable voltage on equipment. The intelligent UPS' functions can also provide power during outages, and the battery automatically charges when power is restored.

How a power supply is supplied?

Power can be supplied from one or two inputs. In case of one input, if voltage at the input is available, power is transferred either via double conversion channel or via bypass channel from input to output. When input voltage is disconnected, load continues to be supplied from accumulator battery and voltage source inverter.
