

Uninterruptible power supply sales in Democratic Republic of Congo

What is the electricity supply industry of the Democratic Republic of Congo?

August /The electricity supply industry of the Democratic Republic of Congo is reviewed,from the formation of the Societé National d'Electricité (SNEL)in 1970 until today. The DRC government established a national utility,because electricity is a key element in the socio -economic development of a country.

What is the main priority for the Democratic Republic of Congo's power sector?

The main priority for the Democratic Republic of Congo's power sector is to increase access to electricity. The Democratic Republic of Congo is a large country with 10 million households of which 1.6 million have access to electricity. This makes it the third largest population in the world without access to electricity.

Why does DRC have a high electricity demand?

All segments of electricity demand are severely constrained by supply. Most demand in the residential sector is unmet,partly because DRC has one of the largest deficits in electricity access in the world and high geographical disparities(see chapter 2 for information about access). So is industrial demand.

How many people live without electricity in the DRC?

This makes it the third largest population in the world without access to electricity. If electrification efforts follow the same pace as during the last decade,84 million people- or 80% of total population - will still live without electricity in the DRC by 2030.

Why did the DRC establish a national utility?

The DRC government established a national utility,because electricity is a key element in the socio -economic development of a country. Due to the national monopoly of SNEL,hydropower plants could be constructed such as Inga1 and Inga2. They supply power to mining in the Katanga province,and to a steel company in Maluku,not far from Kinshasa.

How will rising demand affect electricity service in Kinshasa?

If this rising demand is not met with an increase in supply and improvements to electricity infrastructure,it will lead to further deteriorationof electricity service. In Kinshasa,while 60% of the population has access to electricity,service quality and reliability is very poor.
