With its smaller transformer, high frequency inverters typically surge at a lower rate, and/or for shorter periods of time than its low frequency counterparts. With the new technologies implemented on power inverters, a low frequency inverter can now match or even outpace high frequency in idle consumption and max THD.

I don't know much about low vs high frequency, but what you've said so far (except the quote above) more or less concurs with what I know. No - low frequency isn't the same as modified sinewave. There are high and low frequency modified sinewave inverters as well as low/high pure sine wave ones. I just got my first low-frequency inverter.

In the realm of power electronics, the advent of high-frequency inverters has revolutionized the landscape.
