Energy storage requirements in photovoltaic power plants are reviewed. Li-ion and flywheel technologies are suitable for fulfilling the current grid codes. Supercapacitors will be preferred for providing future services. Li-ion and flow batteries can also provide market oriented services.

What is a photovoltaic/thermal (pv/T) system?

A photovoltaic/thermal (PV/T) system converts solar radiation into electrical and thermal energy. The incorporation of thermal collectors with PV technology can increase the overall efficiency of a PV system as thermal energy is produced as a by-product of the production of electrical energy.

The thermal energy storage (TES) is the most commonly used method for energy storage and peak load regulation by the phase change thermal energy storage (CTES) which garnered a significant attention due to its energy stability and high energy density [4, 5]. The CTES can be divided into sensible heat storage and latent heat storage systems.
