Online uninterruptible power supplies use a combination of rectifier and inverter to supply power to the AC load in normal operation. During a power failure, power is supplied with the support of an inverter. Conversely, an offline system supplies power from the AC mains to the load. An online system's output power supply stays on.

Protection from power loss - An Online UPS (uninterruptible power supply) is connected in-line with your server and protects your IT equipment and systems when power is lost. In the unfortunately event of mains failure, the UPS will automatically transfer your equipment onto its internal or external batteries until power is restored.
